Teaching & Learning Fair - Online Learning (Other)  Abstract 2021-148
Teaching & Learning Fair Presentation  Mode: Synchronous
Session: Teaching & Learning Fair Session 2  Friday June 4, 2021, 2:05 PM - 3:05 PM

The purpose of this Teaching and Learning Fair session is to discuss research-based theories relevant to video content within a student-centered, online learning environment; and provide examples as to how faculty can create quality content to support evidenced-based learning within their curriculum. Of note, two techniques that consistently show improvements in learning outcomes are segmenting and mixed perspectives (Logan & Mayer, 2018). Utilizing software that is part of the commonly-used Microsoft 365 suite of apps, this session will provide faculty with the skills to create videos and produce quality content with tools they already possess.
